

Resident Impact Assessment

2021 Executive Paper – People-Friendly Streets Programme

Service Area: Climate Change & Transport

1. What are the intended outcomes of this policy?

This report addresses Equality impacts regarding the progress and future direction of the people-friendly streets programme, a key part of the council's long-term plan for transforming Islington, as set out in the Islington Transport Strategy (2020) and Islington's Vision 2030 (Net Zero Carbon) Strategy (2020). The future direction of the programme is detailed in the 2021 people-friendly streets Executive Paper.

The people-friendly streets programme of low traffic neighbourhoods (LTNs), School Streets and cycleways was at the forefront of both responding to the Covid-19 public health emergency and preparing to move into the recovery phase. This has effectively accelerated the implementation of the long-term plan and progress against wider council ambitions related to public health, road danger reduction, clean air, climate change, social justice, greening and place-making.

The people-friendly streets programme was implemented as a series of 18-month-long active trials, using experimental traffic orders (ETOs). The council is committed to listening to feedback on the schemes and taking decisions to make changes to improve the how the programme works for people.

Having realised some of its earlier ambitions for people-friendly streets, the council has reflected to ensure that its plan is appropriate for moving forward to embed and continue the transformation it set out to achieve.

The 2020 Resident Impact Assessment (RIA) identified the potential negative impacts that the trials could have on people who have protected characteristics. The RIA set out an initial plan to monitor the trials, and mitigate any negative impacts which were observed. The council undertook to implement the RIA recommendations by gathering evidence to

understand further the impacts that schemes might have on people with protected characteristics, in particular disabled people and those with complex mobility needs. The council engaged with various groups representing disabled people or people with complex mobility needs, analysed feedback including correspondence, trial feedback surveys and Commonplace comments, reviewed existing literature on LTNs and commissioned data on car journeys. This resulted in a change in the approach, which is set out in the Executive Paper and in this document.

The review of the programme is therefore an update on the ways in which the people-friendly streets programme has contributed to the council's Covid-19 response and its progress against the longer-term plan. It also sets out the Executive's decision on the areas it will focus on and changes to practice going forward.

The 2021 Executive Paper covers the following points:

- The continuation of the people-friendly streets programme as outlined in the Executive Paper of 18 June 2020 and amended in the 2021 Paper, including: a) School Streets; b) low traffic neighbourhoods (including the new area of people-friendly pavements); and c) the borough-wide lorry control scheme.
- Finalising and implementing the people-friendly streets programme, taking into account the consultation responses and monitoring.
- The initiation and approach to delivery of School Streets at schools on main roads.
- The initiation of at least four Liveable Neighbourhood schemes, incorporating wider physical and environmental improvements, contributing to the broader place-making agenda.
- The proposed approach to granting exemptions.
- The people-friendly pavements project, which seeks to deliver accessibility improvements for people walking, using wheelchairs or other mobility aids. This will include additional dropped kerbs, decluttering and maintenance, amongst other measures.
- A programme of cycleways: three cycleways have already been implemented under 18-month trials, on York Way, Liverpool Road, and Green Lanes and a timetable is in place to deliver a dense network of cycleways.

The ongoing implementation of the people-friendly streets programme will support the council's objectives of achieving net zero carbon emissions in Islington by 2030. It will also contribute to the delivery of a more equal Islington by: making it easier and safer for people to travel on foot, using a wheelchair or other mobility aid, by cycle and public transport; supporting people to live healthier lives; supporting local shops, markets and businesses; and enabling residents to remain socially active and connected to their community.

Improvements to the borough's streets will ensure that they are friendly to all users – especially children, young people, older people, people with impaired mobility, and people with disabilities and/or in poor health. The council is therefore committed to continuing the roll out of a borough-wide programme of people-friendly streets, which includes the delivery of low traffic neighbourhoods (LTN), School Streets and cycleways.

This RIA relates to the implementation of the people-friendly streets programme as set out in the 2021 Executive Paper.

2. Islington Residents Profile

The programme is borough-wide.

Who is going to be impacted by this change i.e. residents / service users / tenants?

	London	Islington
	Total: 8,173,941	Total: 206,125
Gender: Female	51%	51%
Gender: Male	49%	49%
Age: Under 16	20%	16%
Age: 16-24	12%	14%
Age: 25-44	36%	42%
Age: 45-64	21%	19%
Age: 65+	11%	9%
Disabled	14%	16%
Ethnic group: BME	40%	32%
Ethnic group: White	60%	68%
Religion or belief: Christian	48.5%	40%
Religion or belief: Muslim	12%	9%
Religion or belief: Other	10%	4%
Religion or belief: No religion	51%	51%

	London	Islington
	Total: 8,173,941	Total: 206,125
Religion not stated	49%	49%

Table 1 - demographics of London and Islington

Source: 2011 Census data available at: <https://www.nomisweb.co.uk/>

Profile analysis

16% of people living in Islington identify themselves as having a disability compared to the London average of 14%.

Whilst private cars, taxis, and private hire vehicles can be an important means of transport for disabled people, the main means of transport used by disabled Londoners at least once a week are walking (81%), bus (58%), car as passenger (42%) and car as driver (24%).¹

Analysis of the London Travel Demand Survey (LTDS)² during the period 2016-19 shows the breakdown of all trips by mode shown in Table 2:

Mode	All users in London	People with disabilities in Islington
Walk	42.0%	41.2%
Pedal cycle	4.9%	1.2%
Car driver	7.4%	8.9%
Car passenger	6.2%	16.7%
Motorcycle	0.1%	0.0%
Van	0.3%	0.2%
Bus (public)	14.3%	14.4%
Underground	15.0%	11.4%
National Rail train	4.9%	1.7%
Taxi - London black cab	0.8%	1.7%
Taxi - other/minicab	1.6%	1.5%
London Overground	2.2%	1.1%

Table 2 - Percentages of different trips by mode by different users

The LTDS analyses a sample of over 18million trips every year, and as such it provides a comprehensive picture of travel patterns. It is worth noting that when focusing on trips

¹ Travel in London: Understanding our diverse communities 2019, (TfL, 2019)

² London Travel Demand Survey: <https://tfl.gov.uk/corporate/about-tfl/how-we-work/planning-for-the-future/consultations-and-surveys#on-this-page-1>

undertaken by Islington residents with disabilities, the size of the sample is only a small proportion of the overall sample. However, this is considered the best data source available which links travel patterns such as journey lengths and trip purpose to demographic characteristics.

Islington has a lower proportion of Black, Asian and minority ethnic people (32%) than the London average (40%).

Socio-economic data indicates that the Islington deprivation index varies considerably between and within each ward. Some areas are within the top 15% most deprived areas in the country, whilst others feature in the top 50% least deprived areas of England.

13% of residents in Islington are listed as claiming out of work benefits, compared to 12.2% in London. The Islington average for the Index of Multiple Deprivation is 36 (the higher, the greater the deprivation). For reference, London's average IMD score is 24.

3. Equality impacts of People-Friendly Streets

Overview

The council has a responsibility to its residents to ensure that the Equality Act (2010) is upheld in all its work and projects.

This assessment considers both positive and negative impacts of the proposals. In some instances, a balanced view is taken between positive and negative impacts, in particular where the impacts are considered to have both a positive and negative impact on one group with protected characteristics, especially where there is variation between the requirements of different individuals within such a group. For example, while some disabled people may predominantly travel by private car for mobility there are also many disabled people who use other modes, and therefore for most groups the impacts will be a mix of positive and negative depending on the particular mode of travel generally used. This split between different modes of travel is shown in 'Islington Residents Profile' under the heading of 'Profile analysis'. It shows, for example, that the proportion of trips walked by people with disabilities in Islington is roughly the same as the proportion of trips walked by Londoners as a whole (41.2% compared to 42%, respectively). The proportion of trips taken by car, as a driver or passenger, is 25.6% for people with disabilities in Islington and 13.6% for Londoners as a whole.

What Islington is doing to improve the health and well-being of residents and people in the borough

The people-friendly streets programme is one part of a range of work Islington Council is undertaking to improve the health and well-being of people in the borough. As a programme, it was both a response to the Covid-19 public health emergency and a preparation for moving into the recovery phase, and helps progress against wider council

ambitions related to public health, road danger reduction, clean air, climate change, social justice, greening and place-making.

People-friendly streets aims to encourage, enable and support more people into making healthier travel choices, by walking, wheeling or cycling. The council also campaigns for more accessible public transport, as this can help people with reduced mobility make more sustainable choices. People friendly-streets has an important role in the wider public health agenda to encourage more active lifestyles (including walking and cycling), to help tackle the rise of obesity, to reduce the impact of air pollution on people's health, and to reduce road danger. Using cycles for daily transport also opens up more economic opportunities for people, who can travel further for work at much less expense than using a private motor vehicle or public transport.

Islington also supports all forms of active travel:

- by providing free cycle skills sessions to adults and children;
- through the STARS programme which works with schools to enable healthier school travel;
- by working with TfL and private companies to provide cycle hire;
- through Try Before You Bike, an affordable bike purchase scheme for adult bikes, child bikes and cargo bikes, including an option for businesses to purchase e-cargo bikes at a discount;
- through funding Pedal Power sessions for all-ability cycling, enabling people with a range of disabilities to experience safe cycling at the Emirates and Finsbury Park;
- through its Safer Routes to Estates programme, ensuring physical barriers to movement through council estates are removed and that residents feel safe on walking routes at all times of the day and night;
- through the Social Prescribing Link Workers, who can prescribe activities to patients with non-clinical needs – these include guided walks;
- through developing travel plans on three estates, running surveys and setting up working groups with residents;
- through the Mayor of Islington's support for guided walks in the borough

Future involvement and activity may include:

- projects like Beat the Street, which encourage walking and cycling through the use of games;
- Cycle Sisters, who run supportive cycling groups for women, particularly from Muslim backgrounds;
- increased engagement with disability groups to understand barriers, to increase the opportunities for walking, cycling and using mobility aids, to provide comprehensive advice on what schemes are available. For example, the Motability scheme can be used to lease mobility scooters or powered wheelchairs (not just cars) and we support Transport for All's recommendation that the scheme should be extended to adapted cycles.

Review of the people-friendly streets programme

Originally, the low traffic neighbourhood schemes (as part of the overall people-friendly streets programme) were designed without private motor vehicle exemptions. The traffic filters which were implemented applied to all people driving (including residents). The council initially took the view that exempting any motor vehicles would have significant negative impacts in regards to road danger reduction, uptake of active travel and air pollution, as allowing the continuation of local traffic would likely dilute the benefits of the LTN and impact people with protected characteristics who are disproportionately impacted by traffic.

This approach sought to carefully balance the benefits of reducing traffic within LTNs with the inconvenience caused to people who travel by private motor vehicles. In the schemes implemented between July 2020 and January 2021, exemptions were only permitted for emergency vehicles, TfL buses, the accessible Community Transport bus 812, and a small number of council vehicles, to maximise the benefits of low traffic on all groups. There were concerns that higher volumes of traffic would create significant negative impacts for people without access to private cars, especially disabled people, older people, women and children.

Section 1 of this RIA describes the review undertaken by the council to understand the impact of LTNs on people with disabilities in Islington. Through research, data collection and engagement, the council better understood the nature of the constraints experienced by disabled people who travel by private car, and that a blanket 'no exemption' policy could disproportionately affect people in this situation. Key learnings from the engagement and research highlighted that:

- disabled people who travel by private cars were being disproportionately impacted by LTNs, especially for shorter car journeys;
- the public realm in many areas of Islington is not accessible – especially pavements.

The 2021 Executive Paper includes two main outcomes to improve access and mitigate the negative impacts previously identified in trial schemes:

- the new local exemption policy for Blue Badge holders and;
- the people-friendly pavements project.

Blue Badge exemption policy for low traffic neighbourhoods

The exemption policy will offer an exemption to Blue Badge holders who live inside, or on the boundary road of, a low traffic neighbourhood (LTN). The exemption will only apply for a single LTN and will allow Blue Badge holders to register a single car for their personal use

which is registered to their home address within (or on the boundary of) the low traffic neighbourhood in which they live. Proof of address, car registration and Blue Badge status are likely to be the evidence required. On successful application, a permit will be provided for this car, which will allow the Blue Badge holder to drive, or be driven, through the camera-enforced filters of the LTN in which they reside. The proposed exemption will be complemented by an exceptional circumstance dispensation which will have its own application process.

This limited exemption shows the council's commitment to make reasonable adjustments towards people with protected characteristics (in this instance the protected characteristic of 'disability') if it can be demonstrated that such an adjustment will not increase the negative impacts on other people with protected characteristics (and all other local people) currently benefitting from the LTNs as they were originally implemented. This includes those who do not drive and/or those who have been benefitting from the reduction in traffic volumes and the decrease in road danger. Disabled people are five times more likely to be injured as a pedestrian than non-disabled people.³

Careful consideration was given to the extent of this exemption. The agreed exemption applies to Blue Badge holders who live in (or on the boundary of) an LTN, and who have access to a car registered to their home address within this same LTN. After a successful application for the exemption, the Blue Badge holder will be granted a permit for this vehicle which will allow it to pass through traffic filters installed in the LTN in which the Blue Badge holder lives. The Blue Badge holder would need to be in the vehicle (as a driver or passenger) and the Blue Badge would need to be displayed. Blue Badge holders with access to their own vehicle are likely to represent a very small minority of residents in LTNs. There are 7,788 Blue Badge holders in Islington, 1,713 of whom live within existing LTNs. There may be additional applicants via the exceptional circumstance dispensation, and these numbers will be recorded.

In order to understand if the exemption policy would allow too much traffic through the LTN and therefore reduce its benefits, officers carried out an assessment of these numbers, by combining them with current data for vehicles breaching the restrictions at each filter to construct a model for maximum vehicles per hour passing through each filter at peak time. This assessment showed that, while there were possible increases of traffic at each of the LTN filters following the exemption, the forecasted level of two-way traffic was acceptable. It must be noted that, based on feedback gathered through correspondence and surveys, many drivers with disabilities have continued to make motor vehicle trips with the existing LTN restrictions in place. This means that allowing these drivers exemptions to local filters may not increase actual total trip numbers significantly. Furthermore, the length of these essential car journeys might actually decrease as routes become more direct. There could be an increase in Blue Badge applications which could encourage shorter car journeys and increase traffic in the LTNs. Officers will monitor applications to review this risk. Additionally, the approach might incentivise disabled people who rely on car transport such as taxis to

³ <https://roadsafetygb.org.uk/news/disabled-and-low-income-pedestrians-at-higher-risk-of-road-injury/>

purchase their own cars, which would increase car ownership, pressure on parking and increase the number of car trips within LTNs.

Nonetheless, officers believe that actual traffic volumes might not increase following the introduction of the exemption policy, and that local traffic levels should be acceptable. However, the council will monitor traffic levels on local LTN streets to ensure traffic is kept at low levels, so that exemptions do not result in unacceptable local traffic impacts which could deter active travel. If there are problematic increases in traffic volumes, a review of exemptions would take place.

As well as increases in traffic volumes, another risk of the exemption is increased road danger at filters, as people would not necessarily expect vehicles to drive through areas. This could be particularly dangerous for people crossing the road or cycling. People with mobility or other impairments could also be vulnerable to collision in those areas.

It is recommended that the designated traffic filters allowing people with exemptions through must be adequately signposted with an 'exemption' plate. This plate will use the School Street exemption plate as a model, which uses the phrase 'Except permit holders XXX', where 'XXX' is a particular reference number to a local permit, issued to eligible vehicles. As the plate does not mention Blue Badges explicitly, this removes any potential confusion for drivers from another area (if they possess a Blue Badge) thinking they are exempt from the filter.

The limited nature of the exemption policy means that Blue Badge holders who do not live within an LTN are not eligible for the exemption, as journeys by car across their home neighbourhood are not affected by LTN restrictions. (These Blue Badge holders could apply via the exceptional circumstance dispensation if they have particular journeys which require access through a designated filter in an LTN). The decision not to exempt all Blue Badge holders in Islington from all the filters is informed by journey time and length data collected and analysed by Steer consultants (attached in Appendix 2), which showed that shorter car trips are most impacted by the LTNs while medium or longer journey lengths are not significantly impacted. As disabled people may be less likely to be able to replace these short car trips to and from their home LTN by other travel modes, they could be disproportionately affected by being unable to pass through the filters in their home LTN, which they would meet on every short local journey. Disabled people who do not live in an LTN do not have these short trips restricted in the same way, and impacts on medium and longer journeys are less significant.

Cars used by Blue Badge holders which are not registered to an address within the same LTN are also not included within the scope of this exemption – this could include vehicles used by carers, friends or family members, as well as taxis and private hire vehicles (PHVs). In some of these circumstances, the exceptional circumstance dispensation could be applied if there are particular journeys which require access through a designated filter in an LTN. It would not be feasible to implement a blanket exemption for vehicles not registered to a disabled person in an LTN in a way which (a) maintains the integrity of the

overall people-friendly streets programme and (b) applies the exemption only to journeys undertaken by residents with disabilities.

People-friendly pavements policy

The proposed people-friendly pavements programme is an additional complementary measure towards these reasonable adjustments so that all groups can benefit from the LTNs, and to enable equal access to active travel by:

- Footway repaving
- Foliage maintenance
- Additional dropped kerbs
- Tactile paving
- Street clutter removal

The main beneficiaries of the schemes will be people walking, using wheelchairs or other mobility aids, cycling (including cycles adapted for disabilities) or using mobility scooters by removing through-traffic from the scheme area and reducing road danger.

This RIA

This RIA identifies general positive and negative impacts for groups with protected characteristics and details the specific positive and negative impacts of the people-friendly streets programme review.

Islington has one of the lowest proportions of car ownership per household in the country, with 71% of households having no access to a car.⁴ Transport for London (TfL) has analysed that two thirds of car journeys in London can be walked or cycled⁵ - this proportion is likely to be even greater in an inner London borough like Islington. The implication of these figures is that there is great potential for a large number of trips in Islington to be made by modes other than private car, and even that many existing car journeys could be shifted to active travel modes, with public health and air quality benefits for all Islington residents.

⁴ LBI: [Streetspace funding guidance - Appendix 7 2021](#)

⁵ GLA: [Health Impact of Cars in London 2015](#)

24.3 million more miles were driven through Islington in 2019 than 2013 – an almost 10% increase.⁶ Traffic on London’s local (‘C’ or unclassified) streets has risen by 72%⁷ in the past 12 years, whereas traffic on A and B roads has seen a slight fall over the same timeframe. A and B roads were designed with signalised and multi-lane junctions, wider pavements, formal pedestrian crossings and bus lanes, all of which mean they are able to more safely manage higher volumes of motor traffic than local streets.

There is also a disparity in the road danger present on minor and main roads. In the UK, the most common non-natural cause of death amongst children aged 5 – 14 is being hit by a vehicle⁸ with a mile driven on a minor road, compared to a mile driven on a main road, twice as likely to kill or seriously injure a child pedestrian, and three times more likely to kill a child cyclist.⁹ However, LTNs installed in London in 2020 have been shown to reduce the number of injuries from road traffic collisions by half, relative to the rest of London, with no evidence of increased injury numbers or risk on LTN boundary roads.¹⁰ The people-friendly streets programme has therefore improved the safety of local roads without putting excessive burden on boundary roads.

As the Islington Transport Strategy notes, “Children from black and minority ethnic backgrounds are one and a half times more likely to be killed or seriously injured in a road collision than children from other backgrounds”, so reducing road danger through implementing LTNs seeks to address this inequality directly.

Given the reasons above, more space needs to be allocated to active travel modes. These modes make a significant contribution to reducing road traffic congestion and improving health. They are also an affordable way of getting around.

a. Generally positive impacts

Successful implementation of the people-friendly streets programme review should support the continued delivery of streets that welcome people from all walks of life and represent a fairer balance of different modes of travel.

The actions as a result of the people-friendly streets programme review are aimed at improving accessibility (balancing this with road danger reduction), which should provide benefits to some residents with protected characteristics. The programme overall should also reduce the negative impacts of traffic, improving air quality, reduce noise pollution, reduce injuries from road traffic collisions and reduce community severance. The LTNs and

⁶ DfT: <https://roadtraffic.dft.gov.uk/local-authorities/96>

⁷ DfT: <https://roadtraffic.dft.gov.uk/regions/6>

⁸ http://www.sd-commission.org.uk/data/files/publications/fairness_car_dependant.pdf

⁹ <https://www.icevirtuallibrary.com/doi/pdf/10.1680/jmuen.16.00068>

¹⁰ <https://findingspress.org/article/25633-impacts-of-2020-low-traffic-neighbourhoods-in-london-on-road-traffic-injuries>

School Streets have the potential to make journeys more pleasant and easier, with benefits on mental and physical health.

The programme aims to improve the local area in alignment with TfL's Healthy Streets indicators and Islington Council's Transport Strategy. The list below shows how the programme meets each of the Healthy Streets indicators, with reference to the Islington Transport Strategy where relevant:

- Pedestrians from all walks of life: All people walking, using wheelchairs or other mobility aids will benefit from a reduction in road danger as a result of the lower volume of vehicles traveling through the people-friendly streets programme's LTNs.
- Easy to cross: There will be considerably less traffic on many roads in where the people-friendly streets programme is implemented. This will mean that there are more opportunities to cross informally and formal crossings will be safer for people who are walking or using pavements.
- Not too noisy: The reduction in traffic volumes will also lead to a reduction in noise pollution
- People choose to walk and cycle (and Islington's Transport Strategy 'Healthy' objective): It is anticipated that as a result of the reduction in vehicle traffic on the roads of Islington it will empower people with protected characteristics to cycle, as a big obstacle to cycling for many people is fear of traffic. Moreover, the expected increase in walking and cycling will heighten natural surveillance, and thus improve the sense of safety for those passing through the area.
- Clean air (and Islington's Transport Strategy 'Cleaner and Greener' objective): Cars and other motor vehicles are a major source of air pollution. The reduction of traffic delivered through the people-friendly streets programme roads is anticipated to improve the air quality in local areas, which includes public spaces with seating and nearby residential streets. It also contributes towards the council's target to achieve net zero carbon by 2030.
- People feel safe (and Islington's Transport Strategy 'Safe' objective): Motor vehicles are a source of danger to people walking and cycling on the roads. The reduction in motor vehicles is expected to make people feel safer when walking and cycling thereby empowering people to do so. The council is committed to working with the Mayor of London to achieve "Vision Zero" by 2041, by eliminating all deaths and serious injuries on Islington's streets and reducing the number of minor traffic collisions on our streets.

The people-friendly pavement project will benefit people from all walks of life who are pavement users, for example by removing existing barriers, installing dropped kerbs and improving maintenance of foliage.

People who are Blue Badge holders who live within an LTN and have access to a vehicle registered in that LTN will also benefit from the proposed exemptions at camera-enforced filters in the LTNs where they reside.

Protected cycle lanes would provide considerable benefits to many people with protected characteristics by facilitating and encouraging cycling, most notably for women, older people, younger people, those with various physical and mental disabilities and people from BAME groups.

Finally, the review explores pathways to deliver 'Liveable Neighbourhoods' at Highbury New Park, Mildmay East, Barnsbury & St Mary's and the Cally, which will include wider public realm improvements, implemented alongside traffic measures, in line with the Healthy Streets indicators and objectives of the Islington Transport Strategy. These may also include Play Streets (community-led short closures of streets to enable outside play for children), parklets (miniature green spaces), use of sustainable urban drainage systems (SUDS), improvements to footways, additional pedestrian crossings, freight and home delivery consolidation centres, better signage and wayfinding, and additional cycle parking (including secure bike hangars). It is the intention of the PFS programme to uplift all LTNs to Liveable Neighbourhoods in due course. These additional public realm benefits will benefit all users of the public realm, and achieve greater comfort and sustainability for all users, with positive impacts on children, older residents and disabled people.

Under the heading of 'Specific positive impacts' more details are given on how these could materialise for people with protected characteristics.

b. Specific positive impacts

Protected Characteristic: Age

An increase in activity, including walking and cycling, benefits children in terms of reducing childhood obesity.

The Fair Futures Commission found that some of the barriers to children and young people travelling independently revolved around concerns for personal safety, due to the threats from road danger. Reduced road danger and protected cycleways should facilitate independent travel for children and young people, which is crucial to healthy child development.

Older people, who have higher instances of disabling conditions such as mobility impairment, deafness or blindness will benefit from reduced traffic and road danger because of the lower volumes of cars traveling through the LTNs and School Streets. In addition, older people are also more likely to live with dementia and will benefit from reduced noise pollution. Those older people who are able to increase their active travel will see benefits to their mobility and health.

The Liveable Neighbourhoods and LTNs create improved conditions for cycling, particularly benefitting those older or younger residents with less balance who may want to choose

adapted cycles away from traffic. Well-designed cycleways also provide protected conditions for people using adapted cycles.

Air pollution from cars has a significant impact on younger people who are closer to the car exhaust level and who have lungs that are still developing. A growing body of research demonstrates that this impact can result in significant health complications later in life impacting on their life expectancy and quality of life. Older adults are also known to be particularly sensitive to air pollution.

Older and younger people will benefit from safer crossings in particular because they can take longer to cross the road than the average-aged person.

People walking (including children) will be safer on School Streets because they will have less interaction with vehicles during pick-up/drop off times. This particularly applies to younger children in the community and older residents who are less able to walk. There will also be more opportunities to cross informally and formal crossings will be safer for people walking.

Alternative School Street measures, including green screens and green walls, will reduce noise pollution, improving learning environment for children.

Children who have disabilities or mobility impairments may benefit from the Blue Badge exemption policy, if their carers live with them inside an LTN. The exceptional circumstance dispensation for this exemption may also benefit children who, for example, attend a school in an LTN. It is also likely that older people with limited mobility who travel by private car are likely to have Blue Badges, and could benefit from the same policy. The positive impacts of LTNs on local traffic levels, as evidenced by interim monitoring reports, means less congestion for exempt vehicles.

The people-friendly pavements project will further improve conditions for older and younger people walking (or using mobility aids, including wheelchairs) on pavements, by removing existing barriers, reducing clutter and improving maintenance.

Protected Characteristic: Disability

Compared to the London average, there is a higher proportion of people in Islington who identify themselves as being disabled (16%, compared to the London average of 14%).

LTNs and School Streets can enable easier or more pleasant journeys for disabled people; an increase in independence, a decrease in traffic danger and benefits to physical and mental health.

Pedestrian enhancements could be of particular benefit to people with a disability in terms of navigating the urban environment, including but not limited to those using walking aids, a wheelchair or a mobility scooter. This includes the improvements made through the people-friendly pavements project, which will remove existing barriers, reduce clutter and improve maintenance.

In residential areas, those with cognitive disabilities could benefit from reduced levels of noise pollution, supported by the neighbourhood walking and cycling improvements and the removal of through-traffic. Moreover, some disabled people may feel more comfortable accessing the businesses in LTNs, due to the reduction in traffic as a result of the PFS measures.

Research has shown that one of the main reasons that disabled people do not cycle more is due to inaccessible infrastructure, even though 75% of disabled cyclists report that they find cycling easier than walking.¹¹ The proposals in LTNs will greatly improve conditions for disabled cyclists by reducing road danger without the need for further traffic calming measures. Well-designed cycleways with protected facilities and smooth surfaces provide safe and convenient means of travel for people using adapted cycles.

In this way, providing better conditions for cycling can empower more disabled people to cycle, particularly those with less balance who may want to choose adapted cycles away from traffic. All traffic filters in the LTNs have been designed in a way that is inclusive and accessible to larger cycles such as tricycles and cargo cycles in line with the London Cycling Design Standards. Cycleways with protected lanes are designed to accommodate adapted cycles.

When cycleways are implemented there is usually an opportunity to improve crossing facilities or widen footways which benefits disabled people.

People who are Blue Badge holders who live within an LTN and have access to a vehicle registered in that LTN will also benefit from the proposed exemptions at camera-enforced filters in the LTNs where they reside. The exceptional circumstance dispensation for this exemption may also benefit disabled people who do not live in an LTN, by allowing access through a designated filter (for example, for medical appointments). The positive impacts of LTNs on local traffic levels means less congestion for exempt vehicles.

Protected Characteristic: Gender reassignment

No specific impacts identified.

Protected Characteristic: Marriage and civil partnership

No specific impacts identified.

Protected Characteristic: Pregnancy and maternity

¹¹Wheels for Wellbeing: [Assessing the needs and experiences of disabled cyclists 2018](#)

Reduced volumes of traffic and speeds in low traffic neighbourhoods and Liveable Neighbourhoods will create a less stressful environment, supporting a healthy pregnancy.

Parents and carers with prams will benefit from a better walking environment and reduced traffic flows when crossing roads, especially in the vicinity of schools. This includes the improvements made through the people-friendly pavements project, which will remove existing barriers, reduce clutter and improve maintenance.

Parents or carers who use cycles or cargo cycles for family mobility will benefit from protected cycleways and from traffic filtering and reduced volumes of traffic. Road closures will be designed in a way that is permeable and accessible to larger cycles. It is anticipated that increased safety for people who are cycling will help to empower more parents and carers to use cargo cycles for family mobility.

Traffic filters will create informal play space for children specifically around closure locations, where there will be very low traffic following implementation.

Pregnant people and unborn children in particular may be adversely impacted by air pollution. LTNs and School Streets are expected to reduce traffic volumes and congestion on Islington roads, which is expected to contribute to improved air quality on these streets.

Parents and carers will be safer on School Streets because they will have less contact with vehicles during pick-up/drop off times. There will also be more opportunities to cross informally and formal crossings will be safer for people walking.

The Schools Street programme will create opportunity for safe social distancing which can have positive impacts on parents or carers with prams requiring more pavement space.

When cycleways are implemented there is usually an opportunity to improve crossing facilities or widen footways which benefits parents or carers with prams, and pregnant women.

Protected Characteristic: Race

Developing research has concluded that Black, Asian and Ethnic Minority people are twice more likely to die of coronavirus in the UK than white people making them specifically more vulnerable since the pandemic. As prescribed by Central Government guidance creating safe cycle routes provides an alternative means of travel to public transport as the country emerges from the health emergency. As the Islington Transport Strategy notes, "Children from black and minority ethnic backgrounds are one and a half times more likely to be killed or seriously injured in a road collision than children from other backgrounds". The reduction of traffic volumes and road danger in each LTN should make cycling a more accessible transport mode among BAME people who are underrepresented among people who cycle for transport and for exercise.

Protected Characteristic: Religion or belief

No specific impacts identified

Protected Characteristic: Sex

Women - who are more likely than men to be moving through public space with pushchairs and prams, and expectant mothers and mothers with young children - may also particularly benefit from improved walking and cycling conditions and reduced traffic levels. This includes the improvements made through the people-friendly pavements project, which will remove existing barriers, reduce clutter and improve maintenance.

In London, women are less represented than men in cycling, and lack of safe cycle infrastructure disproportionately impacts women, attributable in part to a more risk averse attitude to mixing with traffic. Research has shown that women particularly value protected cycle facilities and direct routes such as cycleways. Reduced traffic and new cycle infrastructure will benefit and empower more women to cycle.

Protected Characteristic: Sexual orientation

No specific impacts identified

Socio-economic status: To be treated as a Protected Characteristic under section 1 of The Equality Act 2010

Busier roads can, in some areas, dominate more deprived communities. Walking and cycling improvements will benefit those living near busy roads and collision hot-spots when they are moving around their local area. Islington is an extremely diverse borough and the index of deprivation across the borough shows that deprivation does not strictly follow main roads. One of the key findings of a 2021 paper on the interaction of socio-economic status and LTNs is that "Across London as a whole, people in the most deprived quarter of OAs [output areas, administrative areas containing around 300 residents] were 2.7 times more likely to live in a new LTN, compared to Londoners in the least deprived quarter."¹²

Generally, car ownership correlates to household income in London. Therefore, less affluent households are less likely to own a car – and be reliant on walking, cycling and public transport. The low traffic neighbourhoods and cycleways in the PFS programme aim to benefit people who do not own cars by making it easier for them to travel by other modes.

Although the cost of motoring over the past ten years has risen at a lower rate than the cost of living (and significantly lower than rises in public transport costs)¹³ it is estimated that owning and running a car in the UK costs around £3,900 per household annually.¹⁴ There is clearly a benefit to those who are economically disadvantaged if LTNs reduce this

¹² Equity in new active travel infrastructure: a spatial analysis of London's new Low Traffic Neighbourhoods (2021) <https://osf.io/preprints/socarxiv/q87fu/>

¹³ <https://www.racfoundation.org/data/cost-of-motoring-index>

¹⁴

<https://www.ons.gov.uk/peoplepopulationandcommunity/personalandhouseholdfinances/expenditure/articles/familyspendingexplorer/2020-03-26>

cost burden, by removing the perceived need for a motor vehicle once other options become more attractive.

Finally, the greater connectivity via new cycling and walking routes should support social distancing whilst providing better healthy access to employment.

c. Potentially general negative impacts

As has been outlined above, the people-friendly streets programme review measures will have many positive benefits for residents and businesses, and specifically for those with protected characteristics as discussed above. It is also the purpose of this RIA to examine any negative impacts on residents, particularly those with protected characteristics, to ensure that a robust mitigation plan is in place, and so that these negative impacts can be taken into account in decision-making on the implementation of the scheme. Research and engagement have highlighted that for some residents journey times have increased, and/or journeys are more difficult, with negative impacts on mental and physical health.

Key negative impacts of the people-friendly streets programme review have been identified and considered below:

C1: Impact on those who travel by private car

The purpose of the LTN measures is to create a safer environment to enable walking and cycling for people from all walks of life. However, this must be balanced with facilitating the travel requirements for vulnerable residents including those with disabilities and mobility impairments who may rely on cars to travel.

Following the implementation of the schemes, vehicles travelling to streets in and around each LTN will still be able to access all properties that can currently be accessed. None of the measures being introduced will stop people (including residents, businesses, visitors or delivery drivers) from driving to and from each area. However, some routes may need to be changed by driving to and from the nearest main road rather than across local streets.

These changes may therefore result in some increased inconvenience for motorists and could result in longer journey times with an increased cost if private vehicle hire or taxis are relied on.

The council commissioned a piece of research from the consultants Steer to examine the impacts of small, medium and large LTNs on 167 journeys in the borough.¹⁵ The research looked at how those journeys were impacted in length and time before and after LTN implementation. In conclusion, while shorter journeys are most impacted (+118% in length), medium and long journeys were much less impacted (+4% and +3% in length respectively). The research also highlighted that disabled people who travel by car are more likely to make shorter journeys.

¹⁵ This can be found as Appendix 2 of the people-friendly streets Executive Paper (2021).

It should therefore be acknowledged that longer routes are more likely to inconvenience some older or disabled residents, and the specific impacts on those groups is set out below. These should be considered on balance with the positive impacts the scheme will result in for those groups and the wider population, as is outlined above.

The proposed exemption policy at camera-enforced filters for Blue Badge holders within their home LTN for a single vehicle partly mitigate this identified impact on shorter journeys for some disabled people. The exceptional circumstance dispensation for this exemption may also benefit disabled people who do not live in an LTN, by allowing access through a designated filter (for example, for medical appointments). However, the exemption does not address the needs of those who rely on taxis or other private hire vehicles.

C2: The impact on residents who may reside on the main roads surrounding the LTNs and Liveable Neighbourhoods areas

By design, the LTN and LN schemes in the PFS programme review will restrict through routes between main roads, which will encourage non-local journeys to take place on the main road network surrounding each LTN area. Currently, 1/3 of car journeys in London are under 2km, a distance which could easily be walked or cycled by many.¹⁶ This switch between different modes of travel could become a reality when walking and cycling conditions are much improved by the people-friendly streets programme measures.

Despite the opportunities of modal shift, there is a risk that the measures could nevertheless displace traffic onto main roads, which could increase congestion, which would affect bus journey times as well as affecting air quality and community severance.

These impacts would affect residents living on the main road network or near junctions. Increased bus journey times would have a greater impact on certain groups with protected characteristics who are more likely to use bus services, and on those who would have the most difficulty dealing with the impacts of a reduced service.

A monitoring strategy has been put in place to understand whether displacement takes place onto Islington's main roads. Thus far, monitoring in St Peter's, Canonbury East, Clerkenwell Green and Amwell¹⁷ have shown an overall negligible change of traffic volumes on main roads. Similarly, other boroughs' monitoring data (such as Hackney or Lambeth) have shown that traffic on main roads has not substantially increased following LTN implementation. The council continues monitoring traffic and will publish findings.

For future schemes, it is anticipated that immediately following the scheme there will be some displacement while people get used to new road layouts and identify alternative routes. If displacement has arisen as an issue in the medium term, then this will trigger some of the reactive mitigation measures outlined in section 5.

¹⁶ https://www.london.gov.uk/sites/default/files/health_impact_of_cars_in_london-sept_2015_final.pdf

¹⁷ Monitoring reports can be found on each scheme's page at <https://www.islington.gov.uk/roads/people-friendly-streets>

C3: The impact on children, parents or carers who drive and public transport users in relation to School Streets or cycleways on main roads

Several measures relating to School Streets and cycleways can have negative impacts on children, parents or carers who drive.

The potential removal of parking bays outside School Streets or on cycleways located on main roads could negatively impact disabled drivers/pregnant women who need to access the street.

Another impact is that School Streets and cycleways reduce road space for vehicular movement – with the potential to increase congestion and travel times. This could also affect public transport service, which may have a greater impact on certain groups with protected characteristics. Increases in congestion, community severance and worse air quality would impact residents living on the main road network.

d. Specific negative impacts

Some specific impacts have been identified for protected characteristic groups (corresponding to the above general impacts).

Protected Characteristic: Age

C1: Although it will be possible to access all addresses once each scheme has been implemented, older people may travel by private cars, private vehicles for hire, or taxis more for their local trips and so may be inconvenienced by longer journeys. Longer journeys may also involve higher costs.

Children and older people who do not drive could be impacted by the exemption policy if local traffic rises. This could make streets unsafe, and create an intimidating environment for people who do not rely on cars for their mobility, ultimately hindering the objectives of the low traffic neighbourhoods.

Protected Characteristic: Disability

C1: Although it will be possible to access all addresses once each LTN scheme has been implemented, disabled residents or visitors who travel in private cars, private hire vehicles (PHVs), or taxis may have to use new routes for their local trips and so may be inconvenienced by longer journeys (which may also involve higher costs).

However, it must be noted that private cars are just one means of travel for disabled residents and therefore should be considered on balance with the benefits. Evidence in section 2, 'Islington Residents Profile', under the heading of 'Profile analysis', shows that the proportion of trips taken by car, as a driver or passenger, is 25.6% for people with disabilities in Islington and 13.6% for Londoners as a whole. The main means of transport, used by 81% of disabled Londoners at least once a week is walking.

The council is committed to engaging with disabled people and has undertaken pre-consultation engagement with disabled people and groups representing them, and listened to feedback submitted via Commonplace, the trial feedback surveys and general correspondence. This engagement forms part of the evidence informing the proposed exemption policy. Once each PFS scheme has been in place for 12 months, a public consultation will be held to help inform the decision-making around the future of the scheme. Additional engagement with people with disabilities is planned during the consultation focus groups for each scheme.

The council is therefore now proposing exempting Blue Badge holders who live within (or on the boundary of) an LTN from certain local camera-enforced filters. Blue Badge holders will be able to register a single private car from their home LTN for these exemptions, which should improve journey times for local trips. The exceptional circumstance dispensation for this exemption may also benefit disabled people who do not live in an LTN, by allowing access through a designated filter (for example, for medical appointments). However, this policy does not extend to covering trips across neighbouring LTNs, as the council has chosen to limit the exemption to shorter trips that are more impacted in terms of journey time and length compared to medium and longer trips.

Blue Badge holders who do not live within an LTN will see no change from the current position after the exemption policy is implemented. These Blue Badge holders have been given consideration, but will not be included in the exemptions, as traffic filters do not currently affect journeys from their home to nearby main roads around their local neighbourhood. However, they may be able to use the exceptional circumstance dispensation to apply for an exemption which allows access through a designated filter in an LTN.

Similarly, people with disabilities who rely on taxis and PHVs, carers who are not eligible for the Blue Badge exemption and doctors will not benefit from the new exemption policy. As discussed in the 'Overview' paragraphs at the start of section 3, the council seeks to balance exemptions with the benefits of reducing local traffic for all residents, including those with protected characteristics who have benefitted from the LTNs as they currently exist.

At time of writing, it is not possible to implement an exemption for Blue Badge holders using taxis or PHVs, as enforcement cameras would not know whether a Blue Badge holder (who is resident in an Islington LTN) is travelling in a vehicle. To apply the exemption to these Blue Badge holders, the implementable solution would be to exempt all taxis and PHVs that could use Islington's roads, which would have significant impacts in terms of traffic volumes and dilute the benefits of the LTNs. There are 114,900 licenced taxis and PHVs operating in London, as of 2020.¹⁸ This alternative is not considered acceptable. Therefore, for the purposes of the experimental traffic order and any future traffic order which supersedes the ETO, Penalty Charge Notices (PCNs) will apply to non-exempt vehicles going through the filters.

If a technological solution can be found which allows specific and timed exemptions for only those taxi/PHV trips taken by Blue Badge holders who are resident in Islington, compatible with our current use of Automatic Numberplate Recognition (ANPR), then the council will consider exemptions for taxis/PHVs for the purpose of carrying a Blue Badge holder. This would be of benefit only to the 3.2% of trips taken by disabled people which are in taxis or PHVs (this is calculated in 'Islington Residents Profile' under the heading of 'Profile analysis').

The London Taxicard Scheme offers subsidised travel in licenced taxis and private hire vehicles to London residents with serious mobility impairments or who are severely sight impaired. This could offset some of the increase in costs resulting from slightly longer routes as a result of the LTN schemes.

C2: An increase in traffic on main roads could lead to bus delays that could disproportionately impact disabled residents who rely on bus journeys for mobility.

Other: Disabled people who do not drive could be impacted by the exemption policy if local traffic rises. This could make streets unsafe, and create an intimidating environment for people who do not rely on cars for their mobility, ultimately hindering the objectives of the LTNs. Disabled people are five times more likely to be injured as a pedestrian than non-disabled people.¹⁹ Limiting the range of the exemption to Blue Badge holders within their own LTN should help to limit the increase in traffic volumes seen within LTNs, to mitigate this concern.

Disabled people could also be disproportionately impacted by the introduction of new street furniture and infrastructure (such as signage or cycleway wands) which may affect their accessibility if infrastructure is not suitably positioned. The removal of central islands and pedestrian refuges for the implementation of protected cycle lanes can make crossing more difficult and potentially more hazardous. Bus stop bypasses are a particular feature in

¹⁸ https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/944680/taxi-and-private-hire-vehicle-statistics-2020.pdf

¹⁹ <https://roadsafetygb.org.uk/news/disabled-and-low-income-pedestrians-at-higher-risk-of-road-injury/>

cycleways which are likely to become more common and can have a negative impact on disabled bus users.

Protected Characteristic: Gender re-assignment

No specific impacts identified.

Protected Characteristic: Marriage and civil partnership

No specific impacts identified.

Protected Characteristic: Pregnancy and maternity

C1: Although access to all addresses is maintained as part of LTN schemes, pregnant women and those with young children may rely on private cars, private vehicles for hire, or taxis more for their local trips and so may be inconvenienced by longer journeys. Longer journeys may also involve higher costs.

C2: Pregnant women or parents/carers with young children may have reduced mobility, take longer to cross the road, be more vulnerable to traffic collisions and/or be more reliant on car transport, therefore they may be particularly impacted if schemes result in increased traffic and congestion on streets they live on. Pregnant women and unborn children may be particularly impacted by poorer air quality which may result from increased traffic and congestion on their streets.

Other: Pregnant women or parents/carers with young children who do not drive could be impacted by the exemption policy if local traffic rises. This could make streets unsafe, and create an intimidating environment for people who do not rely on cars for their mobility, ultimately hindering the objectives of the LTNs.

Pregnant women or parents/carers with young children could also be disproportionately impacted by the introduction of new street furniture and infrastructure (such as signage or cycleway wands) which may affect their accessibility if infrastructure is not suitably positioned. In particular, protected cycleways using features such as wands could make it more complicated and difficult to cross the road with a pram except at formal crossing points. The removal of central islands and pedestrian refuges for the implementation of protected cycleways can make crossing more difficult and potentially more hazardous.

Protected Characteristic: Race

No specific impacts identified

Protected Characteristic: Religion or belief

No specific impacts identified

Protected Characteristic: Sex

No specific impacts identified

Protected Characteristic: Sexual orientation

No specific impacts identified

Socio-economic status: To be treated as a Protected Characteristic under section 1 of The Equality Act 2010

C2: Lower-income households are less likely to have access to private cars and tend to be more represented amongst bus passengers. This means that any displacement of traffic onto main roads which affects bus journey times could disproportionately impact people on lower incomes. Should any traffic displacement occur, it could also have a disproportionately negative impact on some of Islington's more deprived communities, with consequences in terms of congestion, severance and air quality. However, as noted in the positive impacts, "people in the most deprived quarter of OAs [output areas, administrative areas containing around 300 residents] were 2.7 times more likely to live in a new LTN, compared to Londoners in the least deprived quarter."²⁰ This means that any increase of traffic volumes within LTNs as a result of the new exemption policy could disproportionately impact some of Islington's more deprived communities.

Other: Purchasing and maintaining a cycle is significantly less expensive than the comparable costs for motor vehicles, and can be cheaper than public transport fares. Nonetheless, people with less disposable income may be less able to own a cycle than those with more disposable income. This in turn would mean they would not have equal access to the new cycle infrastructure or not benefit so much from the improved cycling environment.

4. Safeguarding and Human Rights impacts

a. Safeguarding risks and Human Rights breaches

No safeguarding risks for children or vulnerable adults, or human rights breaches, have been identified as likely resulting from the people-friendly streets programme.

The council has considered the provisions of the Human Rights Act for potential breaches that may occur as a result of the proposal and considers that three articles are relevant:

²⁰ Equity in new active travel infrastructure: a spatial analysis of London's new Low Traffic Neighbourhoods (2021) <https://osf.io/preprints/socarxiv/q87fu/>

- Article 1 of the First Protocol – the protection of property;
- Article 2 of the First Protocol – the right to education; and
- Article 8 – the right to respect private and family life.

In relation to Article 1, some residents may no longer be able to use the most direct access to their homes. However, under the operation of these schemes, alternative access will be in place. Further, the right under Article 1 is qualified rather than absolute as it permits the deprivation of an individual's possessions or rights where it is in the public interest. The public interest benefits are outlined within this report and the Executive Paper. Exemptions are also proposed for some filters for Blue Badge holders. The council considers the proposal to be in the public interest.

In relation to Article 2, access to educational institutes is impacted by School Streets for people who drive private cars to Primary School. This is to encourage more people to use active travel, however those depending on private cars for their mobility, for instance disabled people who are Blue Badge holders are exempt from the restrictions. Emergency services are also exempt. Given that children are particularly vulnerable to traffic collisions, air pollution and inactivity, it is considered that restricting traffic actually improves access for children and parents or carers around schools, and that the proposals do not restrict access to educational institutes unacceptably.

In relation to Article 8, right to respect for private and family life has a broad interpretation and extends to being in a public place if there is a reasonable expectation of privacy there. This right can be interfered with where lawful, necessary and proportionate to protect a number of other concerns including public safety and health. It is not considered that the implementation of the people-friendly streets programme will impede the rights to individuals to respect for private and family life either in public or on private land. Further, the scheme is proposed in order to reduce the number of vehicles on the road, which will enhance public safety and health.

If potential safeguarding and human rights risks are identified, then please contact equalities@islington.gov.uk to discuss further.

Summary of actions:

- People-friendly pavements:** Ensure impacts are minimised and accessibility improved in the public realm. The engagement with disabled groups will also identify the opportunities for people-friendly pavements to be implemented and if there are outstanding issues with accessibility for persons with restricted mobility.
- Exemption policy:** Monitor local traffic levels within LTN after implementation of the exemption policy to ensure traffic is kept at low levels. If traffic increases significantly, a review of exemptions would take place. Ensure signage is appropriate at camera-enforced filters where there are exemptions.
- Engagement:** As part of the public consultation, proactively engage with groups representing those with specific mobility needs and disabled individuals in each LTN area or proposed cycleway to ensure that the interests and concerns of these groups and

individuals is represented, understood and considered in deciding to transition to a permanent traffic order.

- **Impacts on main roads:** Continue gathering data on impacts on main road, including on traffic volumes and air quality and bus journey times. This data will be one of the factors to be considered carefully in deciding to transition to a permanent traffic order or to introduce mitigating measures. If required and informed by monitoring data, the council will work with TfL to identify bus priority corridors to improve bus journey times. Bus priority schemes will be implemented in consultation with TfL to protect bus journey times if data demonstrates that there are increased delays in bus journeys for a sustained period. Air quality schemes are being rolled out in parallel, for instance the installation of Electric Vehicle Charging Points and the Ultra-Low Emission Zone extension from October 2021.
- **Cycle affordability:** The council has a programme to help with the affordability of maintaining and securely storing cycles. Islington's 'Try before you bike' scheme helps people purchase a new cycle with monthly payments (£20 for an adult cycle, £10 for children), with the option of returning the cycle and stopping payments if they choose to.
- **Technological and regulatory solution:** The council will work with other boroughs, TfL and taxi/PHV providers to explore the possibility of a technological and regulatory solution, which would allow specific and time-limited exemptions for taxis/PHVs which are carrying Blue Badge holders who are Islington residents.
- **School Streets:** Ensure the parking provision is retained for Blue Badge holders in the vicinity (70m radius) of all school sites, in accordance with the council's inclusive design guidance. The council is continuing to proceed with a monitoring strategy to ensure that the impacts on traffic are considered.
- **Cycleways.** Consider the negative impact of cycleway infrastructure on the protected characteristics of age, disability, pregnancy and maternity, particularly the impact of bus stop bypasses, wands and stepped tracks, and the removal of pedestrian islands, and engage with particular groups. Monitor the impact of changes to infrastructure and adapt or respond where necessary.

This Resident Impact Assessment has been completed in accordance with the guidance and using appropriate evidence.
